CONDITIONS OF SALE

—We guarantee every plant to be in a Healthy condition, up to grade in every respect when leaving our hands. Certificate of State Entomologist is attached to every shipment. We Guarantee Satisfaction.

—We are not responsible for more than the initial cost of plants involved. All claims must be made within 5 days after receipt of plants.

—All quotations are cash and carry at Nursery, 10% charge to be added to price list for crating on all orders to be shipped. Minimum crating charge \$1.00. Minimum order to be shipped \$5.00. All plants are balled and burlapped unless otherwise specified.

TERMS:—Our terms are cash unless otherwise arranged in advance. We require 25% deposit in advance on all C. O. D. orders. In booking orders for future shipments, we require 25% deposit with order, balance due at time of shipment.

CONDITION OF SALE:

—Orders are accepted in the order received, subject to prior sales, on condition refund will be made, should the plants ordered be injured by elements beyond our control.

TRADE DISCOUNT:

—A 33⅓% wholesale discount is allowed to the Nursery and allied trades on all plants quoted in this price list upon proper identification. Special discount allowed on truck loads, cash and carry at the nursery.

Azaleas

Azaleas! The most beautiful flowering plant in the South! All Azaleas are profuse bloomers and in the spring each plant is a solid mass of color.

—Azaleas of all types can be easily grown if a few simple cultural hints are followed. Like the Camellia they require a good, well drained soil that has a slight acid reaction. They will stand more shade than Camellias, however dense shade should be avoided. The addition of leaf mold, peat and in very stiff soil, a small quantity of sand, is always beneficial. The Azalea is not a gross feeder. If plenty of leaf mold or like organic matter is applied they do not require any commercial fertilizer. Azalea roots lie close to the surface and are easily burned, so if a commercial fertilizer is used, it should be merely sprinkled on the ground around the plant and allowed to wash in. As Azalea roots are very fine and require a large amount of moisture, the plants do not thrive in close proximity to trees that have surface roots, such as pecan trees, water oaks, and hickory trees. However, they will do well near such trees if they are constantly watered during dry weather.

A spray consisting of water, oil emulsion, Derris powder and Black Leaf 40 will usually control all scale and insect pests that attack Azaleas. This spray should be applied with considerable force and directly on the forks of the branches and both sides of the leaves. Timing of the spray is important. The first spraying should be applied in the spring immediately after blooming and repeated three or four weeks later. Another spraying in the Fall will act as a general clean-up.

Front view Sales Yard and Store—304 Breaux Bridge Ave.

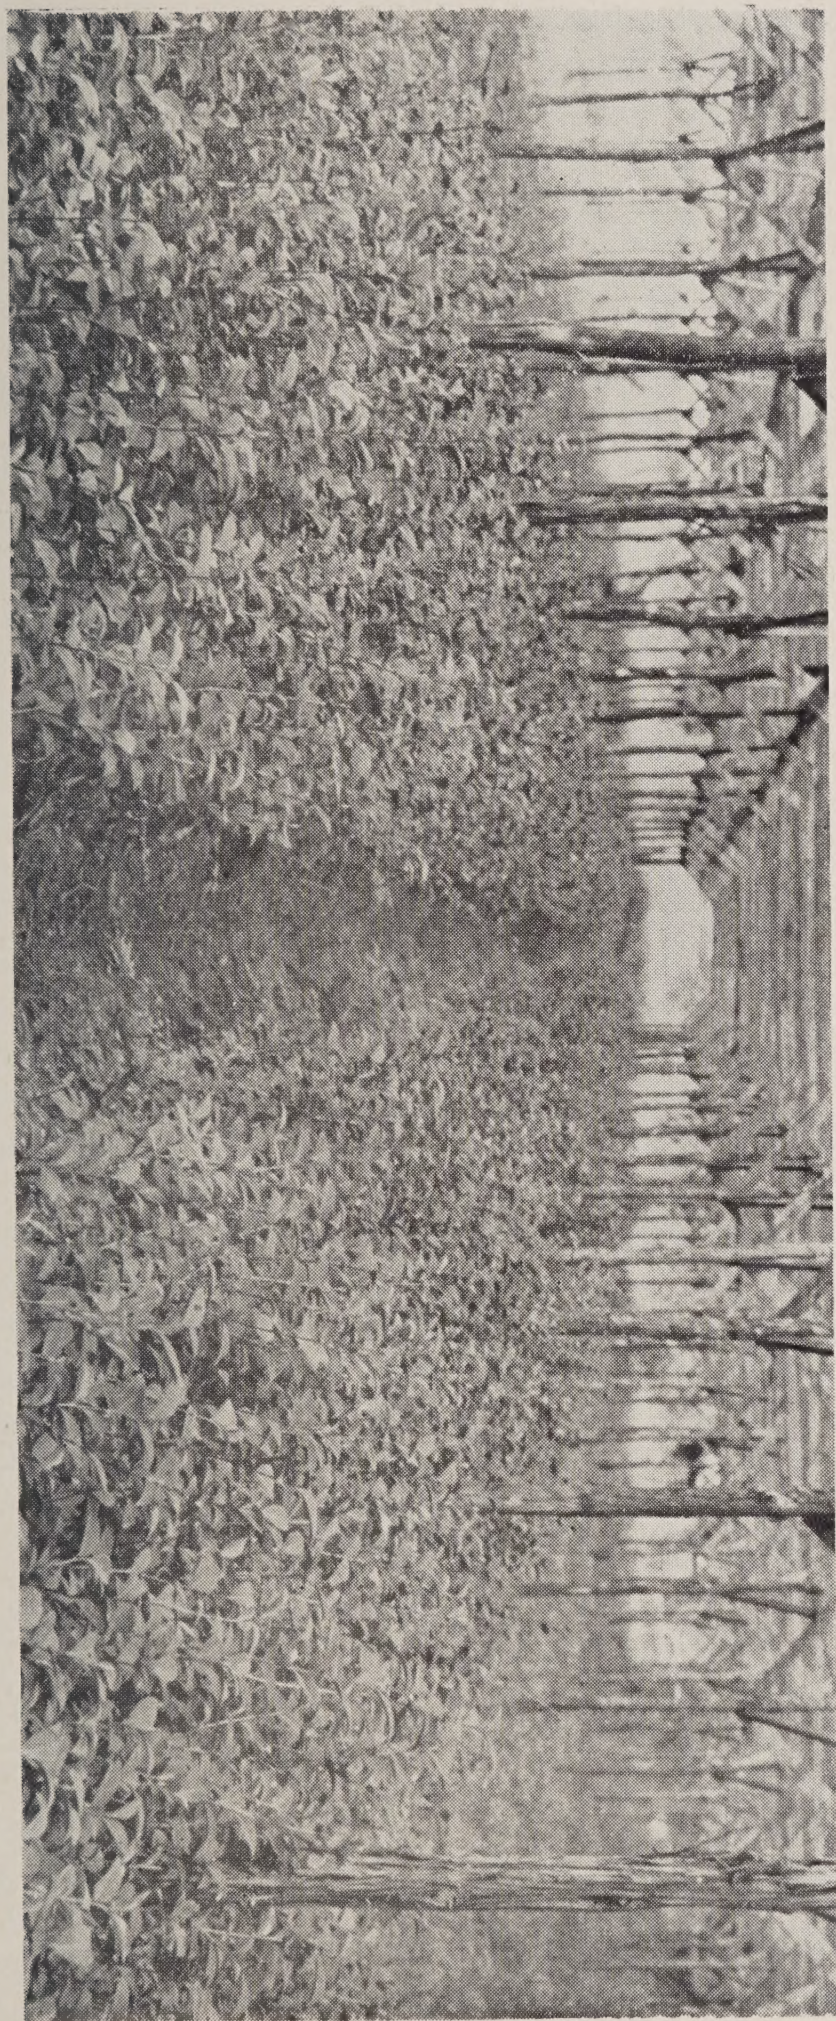

AZALEA INDICA

By far the most popular of all Azaleas along the Gulf Coast and up the Atlantic seaboard to North Carolina, the Indica with it's masses of large colorful flowers, presents a showy landscaping effect second to none. They are fast growers and develop into large size bushes. Some bushes are known to be over 100 years old with a spread from 20 to 30 feet across, still healthy and growing with a profusion of blooms covering the plants each Spring. Most varieties are compact in growth. They require no special care, other than the few cultural suggestions you will find under the heading "Azaleas," elsewhere in this catalog.

KURUME AZALEAS

Commonly known as Dwarfs, these Azaleas will stand the winters of almost all sections of the Southern states without any protection and much farther North with little protection. Their popularity is increasing rapidly as they become better known, especially in the cooler sections of the country where the more tender Indicas are injured by cold. They are also in much demand as pot plants by eastern and northern florists. Their use in landscaping, either singularly, in groups, or in combination with Indicas, give a most pleasing effect and a range of color that could not otherwise be obtained.

CAMELLIA JAPONICA

“Queen of the Garden,” blooming from early fall to late spring, with their peak in mid-winter, the Camellia Japonica offers an array of floral splendor when the garden is otherwise barren. It’s wide range of forms and color patterns make Camellia Japonica the most sought after plant today. And, in recent years it has gained more and more popularity with the floral trade as a cut flower for corsages, etc.

Camellias can be grown in almost any soil however they are at their best in a good, well drained soil that has a slight acid reaction. They should be planted in full sun or partial shade. Complete shade is not desirable. A mixture of one-half garden soil, one-quarter peat moss or leaf mold and one-quarter well rotted cow manure should be used. Even in the best of soils the addition of peat moss or of leaf mold will prove beneficial. **DON’T PLANT TOO DEEPLY.** Plants should be placed in the ground at as near the same level as they were in the nursery as is possible.

Planted too deeply they will not prosper and will very often die. Allow for settling by having the top of the ball several inches above ground level well covered with good garden soil. Mulching with half rotted leaves or peat will further aid in assuring you of having good strong healthy plants.

Because the Camellia does best in a humid climate much attention should be given to watering. They like water but they must have good drainage. Never plant where the water will stand after a hard rain.

Camellia foliage is sometimes attacked by several forms of scales. A spray with water, oil emulsion and Black Leaf 40 will control most scale and insect pests. Spray should be applied in the spring after the danger of frost is over, but before the sun is too hot and early in the fall. Much care should be taken to wet the underside of the leaves thoroughly.

A Few Do's and Dont's to Remember:

- A. Don't plant too deep.
Don't allow water to stand near plant.
Don't spray in mid-summer or winter.
Don't over fertilize.
Don't plant in complete shade.
Don't break flowers, a clean cut near a leaf or branch is permissable.
- B. Do make sure of proper soil condition.
Do water frequently and thoroughly in dry season.
Do spray regularly (at proper time).
Do mulch with leaf mold or peat.
Do make sure of proper drainage.

Peat Moss and Peat Humus, especially suited for acid soil plants—by the pound, by the hundred pounds, by car lots.

Be sure to see our complete selection of Pot Plants, Ferns, Ivys, Cactus, Rubber Plants, etc., Wall Brackets and Holders, Plant Stands, Vases, Baskets, Holders, etc.
